A share class with the lowest risk rating does not mean a risk-free investment.

This share class is in category 6 as it invests in equities or equity-related securities that can vary significantly in price from day to day due to a variety of factors.

The following material risks may not be adequately captured by the risk and reward indicator:

The Fund does not have any guarantees and the value of investments may rise or fall. You may not get back the original amount of money you invested. In addition, the Fund may be subject to the following risks:

Market risk - The Fund invests in equities or equity-related securities, and these can rise or fall due to a number of factors affecting individual companies and local or global stock markets.

Emerging markets risk - Investing in emerging markets carries a higher risk (e.g. larger price fluctuations) than a developed market. Some of the investments may be subject to low liquidity, making them hard to buy or sell at short notice.

Operational risk - The inability to make timely security purchases or disposals due to administrative/settlement problems may result in

missed potential gains or undesirable losses to the Fund.

Counterparty risk - The insolvency of any institutions providing services such as safekeeping of assets or acting as counterparty to derivatives or other instruments, may expose the Fund to financial loss.

Exchange rate risk - Changes in foreign currency exchange rates may adversely affect the value of the investments held in the Fund. Shareholders investing in a currency other than the Fund's base currency should be aware that exchange rate fluctuations may affect the value of their investments.

Single country risk - The Fund invests mainly in the India stock market and thus it can be exposed to country specific risks, and as a result, the Fund may be more volatile than more broadly diversified funds.

Foreign investment risk - Some countries in Asia region may prohibit or impose restrictions on investments by foreign investors and such restrictions may change from time to time.

Derivatives risk - Financial derivative instruments are complex instruments whose performance and value are directly linked to the performance or value of underlying assets and will fluctuate depending on the market of such underlying assets. There can be no assurance that the objective sought by using derivatives will be achieved. The use of derivatives may result in greater fluctuations of the net asset value of the Fund.

Country-specific risk - The Fund will invest directly in securities listed in the stock exchange of India through a sub Foreign Institutional Investor license (FII) with the Indian regulator. Such sub FII would be registered under the FII of the Principal Investment Manager or other Investment Manager.
